Help

IF the user specifies the "Environment" field to distinguish recordings made in an especially n environment, like a car, add the Environment column to the profile table:

Fig. 8

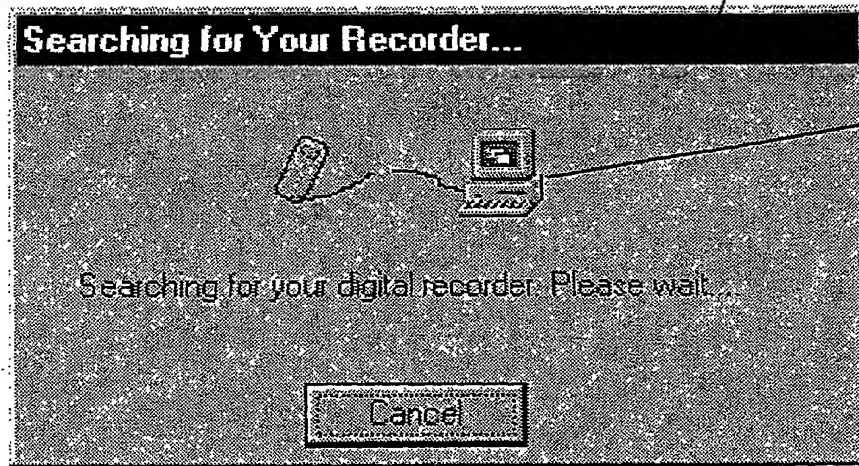

Fig. 9(a)

(This window applies only to the GSL recorder.)

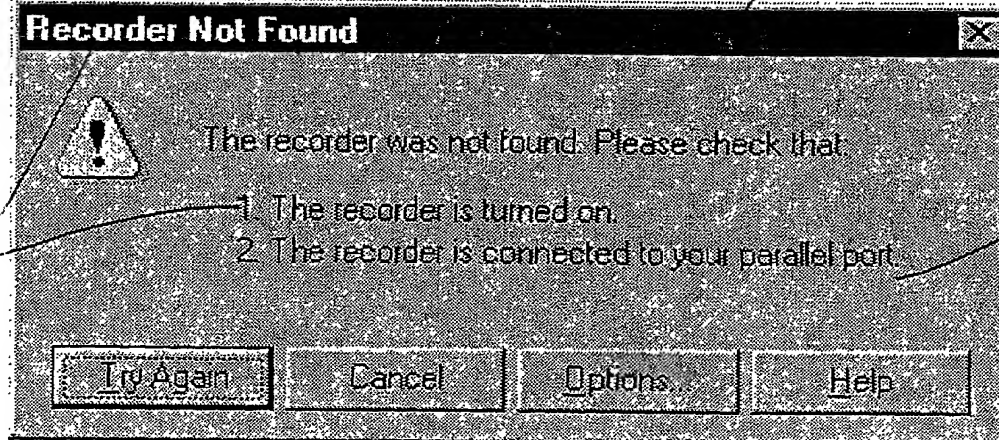

Fig. 9(b)

Which Microphone Was Used for These Recordings?

Because your voice sounds different when you use a headset compared to using the built-in mic, it's important to know which mic was used to accurately transcribe your recordings.

Which mic was used when these recordings were made?

☒ Headset for all recordings
☐ Built-in mic for all recordings
☐ Both: some were recorded with a headset, some with the built-in mic
☐ Don't know

☐ Don't ask. The same mic is always used for all recordings.
